EMV
EMERGENCY
MANAGEMENT
VICTORIA

WORKING IN CONJUNCTION WITH
COMMUNITIES, GOVERNMENT,
AGENCIES AND BUSINESS

Shared Vision

Safer and more resilient communities

Shared Goal

A sustainable and efficient emergency management system that reduces the likelihood, effect and consequences of emergencies

“We work as one”

WORKING IN CONJUNCTION WITH
COMMUNITIES, GOVERNMENT,
AGENCIES AND BUSINESS

“All Communities, All Emergencies”

Focus for 2016

- This is a different way of thinking – it is a transition from “All Agencies, All Hazards”
- “All Communities” is broad – place-based, geographical, common interests
- “All Emergencies” includes fire, flood, storm, human health, animal health, infrastructure, etc

	Class 1 Emergency Major Fire or Control by MFB/CFA/DELWP/ SES	Class 2 Emergency Human Health/Animal Health/Major Infrastructure/Other	Security Emergency
Coordination	EMC (Managed by VicPol)	EMC (Managed by VicPol)	CCP (Managed by VicPol)
Control	SRC (EMC to appoint SRC)	State Controller (EMC to ensure control is established ie: CHO, CVO, Infrastructure)	CCP (CCP to appoint Deputy Commissioner as controller)
Communications (EMJPIC Exec)	EMC	EMC	Assistant Commissioner VicPol
Consequence Management	EMC (State Consequence Manager)	EMC (State Consequence Manager)	EMC (State Consequence Manager)
Relief and Recovery	EMC (State Relief and Recovery Manager)	EMC (State Relief and Recovery Manager)	EMC (State Relief and Recovery Manager)

Working in conjunction with Communities,
Government, Agencies and Business.

Our shared vision

Safer and more resilient communities

From sheep to shore

The objective of emergency management in Victoria is to reduce the impact of emergencies on human life, communities, essential and community infrastructure and the environment.

Challenges

- Population change
- Climate change
- Urbanisation
- Globalisation
- Community look and expectations

Every 11 hours, in Melbourne's suburban growth areas, enough babies to fill an entire prep class are born.

Victoria can expect higher-than-average temperatures, more days above 35 degrees, reduced rainfall, and an increased number of droughts and extreme weather events, including more frequent bushfires and storm activity
